DETAILED ACTION

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on November 16, 2005 has been entered.

Claims 1, 3, 6, and 7 are pending in the application.

Any rejection from the previous office action, which is not restated here, is withdrawn.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1, 3, 6 and 7 are presented for examination on the merits.

For the art rejection below, please note that electroconvulsive shock reads upon "traumatic impact", see, e.g., <http://www.answers.com/shock>, definition of "shock", accessed online 12/08/2005. (See also cited definitions for "trauma" and "impact").

Claim Rejections - 35 USC § 103

Claims 1, 3, 6 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Vandai (US 5,212,158) in view of Hock et al. (US 5,043,346).

Vandai beneficially teaches a method for the treatment of amnesia comprising administering an effective amount of a compound of Formula I (e.g., cinnamoyl-glycyl-L-phenylalanyl-L-prolinamide). [See, e.g., abstract, claims, column 16, lines 13-15 and example 9]. Please note that stimulating nerve growth is a functional effect of such administration, which does not distinguish the instant method from the method of Vandai reciting identical steps.

Vandai does not expressly teach the treatment of amnesia due to cerebral infarction or traumatic impact characterized by nerve cell necrosis, but it does teach the treatment of amnesia due to absorption of chemical substances (e.g., scopolamine), and that the compounds used within such treatment (e.g., cinnamoyl-glycyl-L-phenylalanyl-L-prolinamide) have nootropic activity.

Hock et al. beneficially teach that a substance is designated as having nootropic activity when it is able to abolish amnesia produced in the experimental animals by means of an electroconvulsive shock or the amnesia induced by scopolamine (column 9, lines 12-16). Please note that "characterized by cell necrosis" is a functional effect associated to such events.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to adjust particular conventional working conditions within such method of treating amnesia administering an effective amount of a compound of Formula I (e.g., expressly treating amnesia due to electroconvulsive shock instead of treating amnesia due to absorption of, e.g., scopolamine) based upon the overall beneficial teachings provided by Vandai and because it was known in the art (see Hock

et al., column 9, lines 12-16) that nootropic compounds could abolish amnesia produced by electroconvulsive shock (i.e., traumatic impact). These types of adjustments are deemed merely a matter of judicious selection and routine optimization that is well within the purview of the skilled artisan.

Thus, the invention as a whole is prima facie obvious over the reference, especially in the absence of evidence to the contrary.

Conclusion

No claim is allowed.

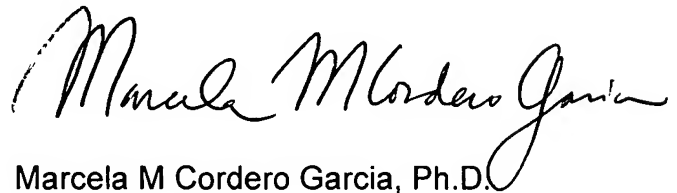

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
